HTML stands for Hyper Text Mark-up Language

Used for: creating web pages (https://en.wikipedia.org/wiki/Web_page) (documents) that are displayed on the World Wide Web (https://en.wikipedia.org/wiki/World_Wide_Web) (websites). The pages can be a mix of text, images, videos, and other elements. It can be created with: notepad, TextPad or any text editors.

Saved as: .html files

HTML Cheat Sheet

Here we are sharing with you the complete HTML Cheat Sheet:

Basic structure

```
<!DOCTYPE html>
<html>
  <head>
    <title></title>
  </head>
  <body>
    body tags and main content
  </body>
</html>
```

The main elements in HTML are the tags. Tags structure and present the data in different forms.

Heading

`<h1>Heading 1</h1>`
`<h2>Heading 2 </h2>`
`<h3>Heading 3</h3>`

Attribute 'style' can be used with `<p>` to display the text inside `<p>` in a specific manner. For example,
`<p style = "color:blue">I will appear blue</p>`
`<p style = "background-color:blue">Highlighting as blue</p>`
`
` line break

Span

Span tag is used for styling inline elements.

NOW
PLAYING

` Address `

- prints the word 'Address' in the specified color (here green). The style attribute is used to style HTML elements.

Characters

- ** ** - space (non-breaking)
- **"** - add quotation mark (")
- **<** - less than symbol (<)
- **>** - greater than symbol (>)
- **&** - the '&' or ampersand symbol
- **©** - copyright symbol
- **™** - trademark symbol

Formatting

- `Bold text `
- `<i>Italic text</i>`
- `<u>underlined text</u>`
- `<mark>I am highlighted in yellow</mark>` - marks the text in yellow. If other colors are needed, span is used.

- `I am highlighted in pink`
- `I am strong` - give emphasis to a particular text; mostly bold

ed. Attributes of `` -

ourier New

(eg. #FF000F) or text (eg.red)

t size

- `<strike>Strike that out</strike>` - strikethrough the text inside the tag
- `` - superscript (text above the normal text like exponential numbers)
- `` - subscript
- `` - emphasis
- `<pre></pre>` - preformatted text
- `<tt></tt>` - typewriter text

Body

`<body>` - the main content lies in the body. Inside `<body>` there can be many sections. **Attributes –**

- **background=""** - Background Image source; can be left empty if no image
- **bgcolor=""** - Background Colour in hex value
- **text=""** - page text color

- **link=""** - Link Colour
- **alink=""** - Active (current) Link Colour
- **vlink=""** - Visited Link Colour
- **bgproperties=""** - Background Properties. A value of "fixed" means non-scrolling watermark
- **topmargin=""** - Top Margin Size in Pixels
- **leftmargin=""** - Side Margin Size in Pixels

Metadata

`<meta>` tag is a part of `<head>` and describes information about data. Most common use of metadata is by search engines for keywords. `<meta charset = "UTF-8">` - most common character set **Attributes –**

- **name** = "" – can be name like keyword, author, description etc...
- **content** = "" – the value corresponding to above names

content="What is HTML, How to learn HTML">

Next
Stay

Tags are very common when multiple sub-sections are required

<hr> has the following attributes –

- **<hr size = "" width = ""/width = "%" color = "" align = "left/center/right">**
- **size** – thickness of the line in pixels
- **width** – in pixels or percentage (any one)
- **color** – color in hex value
- **align** – alignment; left, right or center

Tables

```
<table>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
</table>
```

- **<table>** - creates a table,

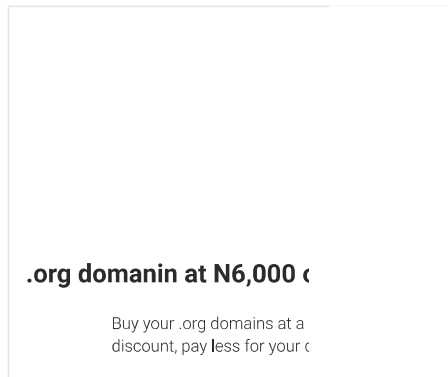

- **<td>** - creates column,
- **<th>** - creates header columns

<table> attributes –

- **border=""** - Thickness of outside border in pixels
- **bordercolor=""** - Border Colour in hex value
- **cellspacing=""** - Space between each cell in pixels
- **cellpadding=""** - Space between cell border and content
- **align=""** - Horizontal Alignment; left, right, center
- **bgcolor=""** - Background Colour hex value
- **width=""** - Table Width in pixels or %
- **height=""** - Table Height in pixels or %

<td> attributes

- **colspan=""** - Number of columns the cell spans across
- **rowspan=""** - Number of rows cell spans across
- **width=""** - width of cell in pixels or %
- **height=""** - height of cell in pixels or %
- **bgcolor=""** – hex value of background colour for the cell (column)

- **align=""** - Horizontal Align; left, center, right
- **valign=""** - Vertical Align; top, middle, bottom
- **<colgroup>** - is used to define attributes for particular columns of the table.

Example –

```
<colgroup>
  <col span="1" style="background-color:green">
  <col style="background-color:blue">
</colgroup>
```

The first column will be highlighted as green, whereas other columns will be highlighted as blue.

⊗ Forms (HTML Cheat Sheet)

outs, submitting a page, filling a form happen inside this tag. It is a group of related inputs.

<form> tag attributes –

- **action="url"** - destination url upon form submission
- **method=""** - form method - get, post
- **enctype=""** - type of encoding; for file upload it is "multipart/form-data"

<input> tag attributes –

- **type=""** - Mandatory input Field Type: text, password, checkbox, submit and so on.

- **name=""** - Form Field Name (mandatory for form processing)
- **value=""** - value (entered by user) or default value
- **size=""** - field size
- **maxlength=""** - Maximum acceptable length of Input Field data
- **checked** - Mark selected field in checkbox (multi-select) or radio button (single-select)

<select> </select> - Select options from drop-down list **<select> tag Attributes:**

- **name=""** - Drop Down Combo-Box Name; mandatory for form processing
- **size=""** - size of the drop-down list
- **multiple** - Allow multiple selections

<option></option> - individual items of the drop-down list **<option> tag Attributes:**

- **value=""** - Option value selected or default value set
- <textarea>lot of text like description </textarea> - Large area for text inputs

<textarea> Tag Attributes:

- **name=""** - Text area name for form processing
- **rows=""** - Number of rows of text shown
- **cols=""** - Number of columns (characters per row)

- **wrap=""** - text wrapping

⊗ iframe

other document within the current document (page) in a frame.

document to be embedded

is defined by 'a' tag – `<a>` **Attributes –**

- **href = ""** – the url to be visited when the link is clicked
- **target = ""** – specifies where to open the link - `_blank` (new tab/window), `_self` (same window/tab), `_parent` (in the parent frame), `framename` – open in a particular frame.
- **title = ""** – gives information about the element
- **id = ""** – to create bookmarks in the page that can be used as value in href attribute.

Examples –

- `Go to hackr.io`

- `Open a resource from the given location`
- `Reach a div element specified by the name`

Styles

For styling, there are many attributes being used with various tags. The attributes are –

```
<style>
text-align= "" - align text; left, right, center
background-color = "" - background color of the element
color="" - for color of texts
font-family = "" - for various fonts
font-size = "" size of the font
border = "" - border thickness and color for a table
</style>
```

These styling elements are put together in a CSS.

Lists

There are two types of lists – ordered and unordered. `` - ordered list **Attributes –**

- **type=""** – the numbering of the list – A, a, I, I, i
- **start = ""** – starting value

- `` - unordered list

⊗ Attributes –

circle, disc

Images

`` - shows the image when page loads **Attributes –**

- **src = "sourceofimage"** – source of the image; url or file location; mandatory
- **alt = "alternate text"** – alternate text; mandatory
- **align = "left/right/center"** – alignment with respect to surrounding items (text)
- **width = ""** – in pixels or percentage
- **height = ""** – in pixels or percentage
- **border = ""** – thickness of the border in pixels

- **hspace = ""** – space in pixels on the sides of the image
- **vspace = ""** – space in pixels on top and bottom of the image

HTML5 Tags

- **<aside>** - content that is not part of any element, but has to be put alongside the main content
- **<figure>** - any illustration like photos, diagrams, code listing and so on.
- **<figcaption>** - caption for the `<figure>` element
- **<header>** - A section's heading (similar to that in MS word), header can have other content like navigation links, forms etc...
- **<footer>** - the content at the bottom of the page/section eg. copyright information, terms and conditions etc...
- **<main>** - the tag is an indicator of where the main content of the page starts
- **<details>** - box with expand/collapse functionality to allow for more text space
- **<summary>** - summary of content of the particular element. Can be description, caption etc...
- **<mark>** - highlight part of a text to give prominence

- **<nav>** - section with navigation links to sections on a page or to other pages
- **<section>** - a particular part (group) on the page, for example, about us or testimonials section of a web page
- **<time>** - date and time in a human-readable format. It can have date, time, time-zone offset, durations etc...
- **<input type="checkbox">** - defined preset options for input controls
- **<form>** - form generator for forms. Public key is sent to server when form is submitted, while the private

- **<output>** - result of any calculations
- **<progress>** - indicates task progress through a progress bar
- **<embed>** - embed media from external source
- **<source>** - source for audio or video
- **<audio>** - for music content or sound
- **<video>** - to present a movie or video

A cheerful, full of life and vibrant person, I hold a lot of dreams that I want to fulfill on my own. My passion for writing started with small diary entries and travel blogs, after which I have moved on to writing well-researched technical content. I find it fascinating to blend thoughts and research and shape them into something beautiful through my writing. View all posts by the Author
